CypressTel

OneWAN SASE

## Secure, Simplified, and Scalable Access to Networking & Security for the Modern Era

Revolutionize Your Network Security with CypressTel SASE

With increasing concern about security issues worldwide, enterprises need a comprehensive security solution to protect their network infrastructure and prevent data leakage.

Reliable and secure network connectivity is essential for businesses dealing with cloud computing, mobile devices, and remote work. CypressTel offers an innovative Secure Access Service Edge (SASE) solution that integrates advanced SD-WAN capabilities. This cloud-based management platform provides various security functions such as FWaaS, ZTNA, CASB and DLP, simplifying the management of multiple network appliances. Our SASE solution is highly flexible, scalable, and agile, allowing users to access network resources and applications from anywhere securely.

How it works?
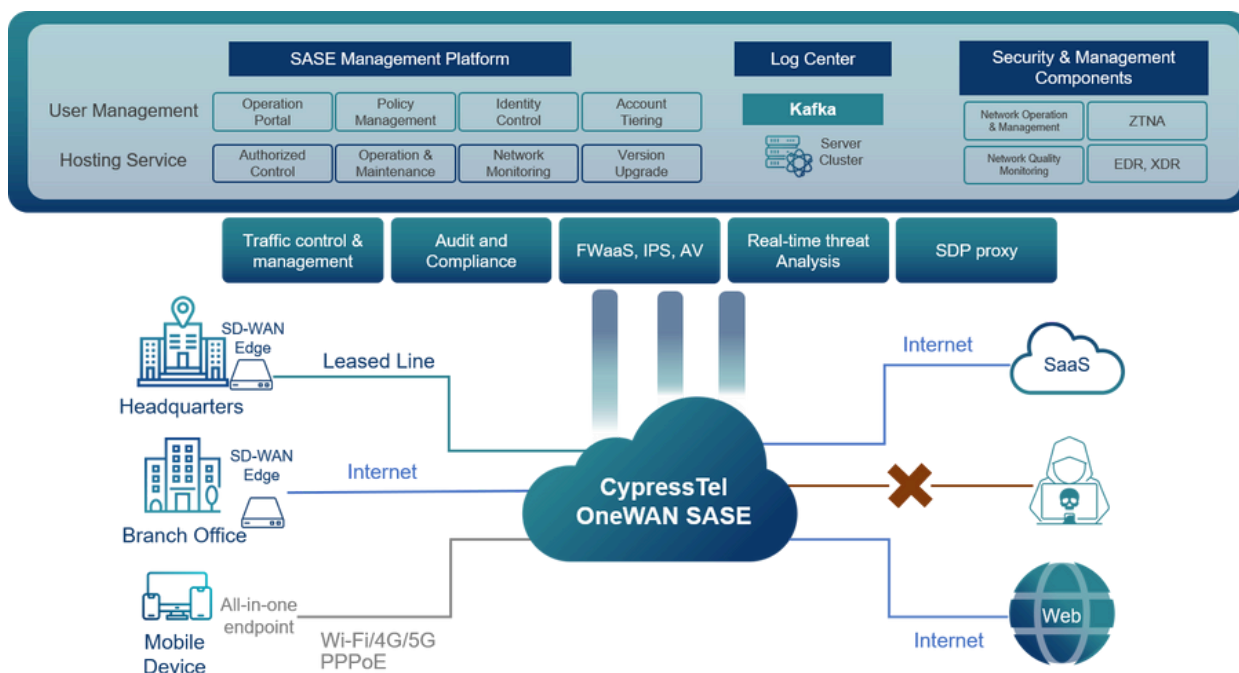

SASE utilizes SD-WAN capabilities to offer optimized network routing, global connectivity, WAN and Internet security, cloud acceleration, and remote access. It combines the features of network and security point solutions into a unified cloud-native service, reducing complexity and enhancing security.

Enterprise-Level Security
Zero-trust network Access (ZTNA), Firewall-as-a-Service (FWaaS), Cloud Access Security Broker (CASB), Data Loss Prevention (DLP), DDoS protection, and a range of other advanced security measures are implemented to ensure the safety and integrity of our network and data. These measures include strict access controls, continuous monitoring, encrypted communication, and proactive threat detection and response.

Safety and Dependability
Our services offer a 99.99% Service Level Agreement (SLA) with flexible pay-as-you-go delivery. We operate over 4+ Security Operations Centers (SOC) and Network Operation Centers (NOC) worldwide. Our maintenance support, provided by a global professional support team, is available in multiple languages.

Extensive Network Coverage
Over 120 service access points are located globally, strategically positioned for fast and reliable connectivity. The network incorporates SD-WAN capabilities, ensuring secure and efficient access to all applications and data.

Centralized Management Platform
Manage all your tools with a unified interface for easy cybersecurity management on a single cloud platform. Our cloud model is designed to support various hardware and software deployments. Use our global PoP network to quickly scale and expand your coverage.

Integration with our SD-WAN solution
Organizations can integrate network security features into SD-WAN, consolidating processes and reducing time and costs instead of deploying them separately at each branch or data center on the network edge.

Why CypressTel?

- We are a carrier-neutral service provider and have a strong presence in Asia and China.
- We have built an extensive ecosystem of partnerships with industry leaders to provide advanced enterprise solutions.
- Our one-stop network solution provides a customized total business solution to meet your unique needs.
- We offer 24/7 multi-language customer support with certified experts who hold CCIE, CISP, CCSA, and other certifications.
- We hold ISO-certified and world-class accreditations and licenses to ensure compliance with regulations and industry standards.
